SKILLS

`languages`
Java, Python, TypeScript, JavaScript, SQL, Dart

`backend`
Spring / Spring Boot, REST API design, gRPC, MuleSoft, Apigee, Maven

`frontend`
Angular, Flutter, HTML / CSS

`data`
MSSQL, Oracle, PostgreSQL / PostGIS, MySQL

`tooling`
Docker, Git, code review, automated testing, agile delivery

LANGUAGES

English — fluent
German — A2
Hindi — native

EDUCATION

M.Sc. Web Science
University of Koblenz and Landau
`Oct 2018 – Feb 2024`

B.Tech. Computer Science
SRM University, India
`Jun 2011 – Jun 2015`

CERTIFICATIONS

MuleSoft Certified Developer — Integration & API Associate

Oracle Certified Associate — Java SE Programmer I

Android Application Development

PROFILE

Full-stack software engineer with 6+ years building and modernising production systems in Java, Spring, and Angular. Most of that work is operational software — booking management, invoicing, and customer maintenance workflows — where correctness and uptime matter more than feature count. Also built an operator interface for planning missions and controlling UAVs and ground-based robots, and Python routing services for railway infrastructure planning.

EXPERIENCE

Software Developer — Alpha Loop GmbH · Lindlar, Germany

`Java · Spring · Angular · REST · MSSQL` `May 2024 – Present`

Develop and extend the logistics platform used to manage bookings and customer maintenance, working across the Angular frontend and the Java / Spring backend.

Design REST APIs and reusable frontend and backend components shared across several modules of the platform.

Investigate and fix production defects and performance bottlenecks reported by operations staff, reducing recurring incidents.

Software Engineer — Kuehne+Nagel · Hamburg, Germany

`Java · Spring Boot · Angular · Oracle` `Aug 2022 – Feb 2024`

Rewrote booking-detection logic in the CASS airfreight billing system, cutting missed and incorrectly billed shipments.

Built the first version of automatic invoice generation, removing a manual step from the airfreight invoicing process.

Traced recurring profit-share defects to shared root causes and replaced one-off patches with generalised fixes.

Student Research Assistant — TU Braunschweig · Brunswick, Germany

`Python · REST · PostgreSQL · PostGIS` `Mar 2020 – Mar 2022`

Built Python REST services powering the planning tools used to route railway infrastructure.

Implemented PostGIS-backed services that let planners generate and compare alternative routing variants across the spatial network graph.

System Engineer → Senior System Engineer — Infosys · Pune, India

`Java · MuleSoft · Apigee · middleware` `Jun 2015 – Jul 2018`

Built enterprise integrations in Java, MuleSoft, and Apigee to move data between client systems that had no shared interface.

Ran production support for middleware applications against client SLAs, diagnosing integration failures to root cause.

PROJECTS

Skyview — UAV / Ground Robot Mission Control Interface

`Flutter · Dart · REST · OpenStreetMap Nominatim`

Built an MVP operator interface for planning missions and controlling UAVs and ground-based robots, plus a cross-platform geocoding package on the OpenStreetMap Nominatim API.

IDOHA — Master's Thesis: Image Database for Humanities Research

`Dart · Flutter · Python · gRPC · PostgreSQL · YOLOv4 · DeepPrivacy`

Built a full-stack annotated image database for humanities researchers, with a YOLOv4 pipeline that detects and anonymises people in uploaded images.

Electronic Voting System

`Java · JPA · Payara · MySQL · JavaScript`

Team project: a polling platform letting university staff and students run polls and analyse, visualise, and share the results.
